MAGICSTONE

Handcrafted Smokeless Instruments

GET TO KNOW YOUR INSTRUMENT

Simple Technique

- Remove the magnetic cover by lifting up.
- Fill the basket w/flower, crumbling it with your fingers, but don't pack it.
- Replace the cover, it will click in place magnetically.
- Place the flame above the firehole and begin drawing easily at first.
- Increase the strength of your draw gradually over about 4 seconds.
- Continue drawing for another 3 seconds or so without the flame.
- Stir the basket after every other hit or so to release more compounds.

It Really Is Your Instrument

Once you've dialed in your balance between how long you light and how hard you draw, varying between light hits and heavy hits will be simple. Just keep a clean basket for consistent performance.

Quick Tips

- Start out drawing slow and easy to learn how to warm the stone chamber.
- After you stop lighting, the longer you draw, the stronger the hit.
- Vary how long you light and how strong you draw for a micro or macro hit.
- Slide your thumb onto the edge of the basket while moving the cover on & off.
- If you're not getting a good hit, clean your basket and/or fill your lighter.
- How often to clean your basket depends on the stickiness of your flower.
- Grasp firmly at the stem and twist while pulling to remove the pressure-fit mouthpiece. Push while twisting it into place to replace and align it.

DON'T

- Stick anything in the firehole. It will damage your Alchemy.
- Use a torch lighter. It won't work, and will damage your Alchemy.
- Put anything other than dried flower in the basket.
- Put your MagicStone in a dishwasher.
