# MAGICSTONE

Handcrafted Smokeless Instruments

# Torch Technique

A small torch lighter is the ideal heat source for your MagicStone™ instrument, delivering clean, tasty hits quickly and easily. Hold your torch about 1.5 inches above the intake and aim the jet flame directly at (but not in) the brass intake hole. Draw steadily to warm the stone oven over 3-6 seconds. As you feel the air getting warm on your tongue, remove the flame while continuing to draw cool air for a few more seconds.

- Grind your flower – fluffy herb makes for good air flow.
- Remove the magnetic cover by lifting up and sliding off.
- Load the basket – fill it but don't pack it.
- Place the cap back on the ring, making sure it clicks into place.
- Light your torch and hold the flame 1-1.5" above the intake.
- Begin drawing steadily, keeping the flame outside the intake.
- Remove the flame and *continue drawing* for a few seconds more.
- Stir your herb after every couple of hits to release more terpenes.

## Quick Tips

- Start out drawing slow and easy to learn how to warm the stone chamber.
- Vary how long you light and how strong you draw for a micro or macro hit.
- After you stop lighting, the longer you draw, the stronger the hit.
- Consecutive hits get easier as the stone maintains and increases its warmth.
- Turn the cover 1/4 turn after each hit to spin the basket underneath, exposing a fresh section of basket towards the draw.
- Slide your thumb onto the edge of the basket while moving the cover on & off.
- If you're not getting a good hit, clean your basket and/or fill your lighter.
- How often to clean your basket depends on the stickiness of your flower.

## DON'T

- Stick anything in the intake. It may damage your MagicStone.
- Put anything other than dried flower in the basket.
- Put your MagicStone in a dishwasher.
